

All screens will have generally have home, alerts, and settings at top.

Home and basic help wireframes.

Buttons with images large enough for visually impaired users. Contacts for messaging, maps for directions, camera for easy pictures, calendar for scheduling. Basic help leads to basic help screen that asks what kind of help they need. Emergency help leads to emergency screen to varify if its an emergency incase they misclicked.

The contacts button will lead to phones messaging app, maps button to google maps, camera opens camera, and calendar opens calendar app where they can set notifications for appointments/meetings.

The basic help buttons notify what kind of help they need to the facilities staff.

Emergency verification screen and confirmation wireframe. Verification that its an emergency just incase the clicked by mistake. Yes gives confirmation no leads back to home screen.
